No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                  Score

CC encoding Saratin, an expression vector comprising the DNA sequence, a CC immunospecific for Saratin, and methods for identifying Saratin agonists CC or antagonists. Saratin is useful for treating thromboembolic processes, CC or antagonists. Saratin is useful for treating thromboembolic diseases. CC It is useful for preventing thromboembolic diseases. CC or coating artificial surfaces, since use of Saratin is also useful con-adhesive for cells and prevents the activation of cells. It may also useful for modifying intraocular lenses in order to lessen the CC useful for modifying intraocular lenses in order to lessen the CC useful for modifying to modify the lens material. For contacting the lens material is covalent crosslinking to modify the lens material. The lens material which may be implanted into the eye. This new type of coating avoids CC medicaments that are for instance conferring cell death, Saratin coating the lens to completely overcome nosterior cansule constitution with other helps to completely overcome nosterior cansule constitution with other helps to completely overcome nosterior cansule constitution with other helps to completely overcome nosterior cansule constitution which other helps to completely overcome nosterior cansule constitution which other the constitution with other material coating avoids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

The methods and nucleic acid molecules, etc. are useful for production of transgenic animals, especially a transgenic mouse for the study of diseases associated with bone development, e.g. spondyloepiphysal dysplasia and achondroplasia. This sequence encodes the murine LOBO protein described

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel nucleic acids (I; designated LOBO (long bones)) encoding proteins influencing bone development in mammals. The proteins of the invention reduce and/or inactivate bone extension (i.e. development), with exception of the same and have osteopathic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 3; Page 69-97; 391pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding proteins which influence bone development, useful for treating and studying bone disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  07-OCT-1999.
                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes novel nucleic acids (1; designated LOBO (long proteins influencing bone development in mammals. The bones)) encoding proteins influencing bone development in mammals. The proteins of the invention reduce and/or inactivate bone extension (i.e. proteins of the skull and have osteopathic activity. The nucleic acid molecules, proteins and antibodise can be used in ethods of the state of the skull and have osteopathic activity. The methods and nucleic acid molecules, etc. are useful for gene therapy. The methods and nucleic acid molecules, etc. are useful for production of transgenic animals, especially a transgenic mouse for the study of diseases animals, especially a transgenic mouse for the study of diseases are specially attansgenic mouse for the study of diseases. This sequence encodes the murine LOBO protein described a chondroplasia. This sequence encodes the murine LOBO protein described in the mathematical control of the study of diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     27-MAR-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (PEKE ) PE CORP NY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invention capable of developmental biology and in elucidating cell signalling and useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLO1840-ABL16175) and the encoded proteins sequences (ABLO1840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Venter JC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             P-PSDB; ABB62011.

The invention relates to 2175 novel human ovarian antigens (ABP41054-CC ABP4328) and to cDNAs encoding them (ABC54131-ABC56305), and also to the sequences of the invention. The invention additionally relates to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen contracting, prognosing or preventing various ovarian antigen antigen polynucleotides, antibodies against human ovarian antigens and the use of covarian antigen polynucleotides and polypeptides in diagnosing, conditions include ovarian cancer and breast-related disorders. Such conditions include ovarian cancer and breast-related conditions (e.g., infertility, disorders of pregnancy, annovulation, conditions (e.g., chlamydia, HIV, toxoplasmosis, endocrine ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine conditions (e.g., chlamydia, HIV, toxoplasmosis, endocrine conditions (e.g., antended disorders, and toxic conditions (e.g., mastitis, ophoritis, and toxic conditions (e.g., mastitis, ophoritis and corder conditates, autolumnue ophoritis, systemic lupus erythematosus), and urinary system disorders (e.g., antended ophoritis, systemic lupus erythematosus), conditate ovarian antigen pohypeptides and toxorders (e.g., antended ophoritis, systemic lupus erythematosus), conditate ovarian antigen pohypeptides and disorders, particular disorders, ophoritis, systemic lupus erythematosus), conditate ovarian antigen pohypeptides and conditate ovarian antigen pohypeptides and sourcers (e.g., chlamydia, cardiovascular disorders, conditate ovarian antigen pohypeptides and toxorders ophoritis, cardiovascular disorders, conditated ovarian antigen pohypeptides may be used as food additives or to prepare antibodies convention.

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polynucleotide are also used in diagnostics, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags (CC intestore normal activity of (II) or to treat disease states involving CC quantitating a polypeptide in tissue, as molecular weight markers and as CC quantitating a polypeptide in tissue, as molecular weight markers and as CC disorders involving aberrant protein expression or biological activity. (CC disorders involving aberrant protein expression or biological activity. CC disorders involving aberrant protein expression or biological activity. CC algorities, forensics, gene mapping, identification of mutations in cresponsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       XX

The genes transcribed in T or B cell p160 activation likely include those of which are involved in T or B cell activation or production of T or B cell appending the production of T or B cell specific factors e.g. lymphokines or antibodies. This p160 B cell specific factors e.g. lymphokines or antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           place polypeptides can modulate degradation of cellular proteins e.g. cell pycle regulatory proteins stimulating expression of cell cycle dependent kinase inhibitors and arresting cell cycle progression at specific kinase inhibitors and arresting cell cycle progression at specific boundaries to thereby modulate cell proliferation. As place boosts B cell boundaries to thereby modulate cell proliferation. As place boosts B cell infections in the second control of the second control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide is also a substrate for serine/threonine kinase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3211 BP; 649 A; 990 C; 948 G; 624 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 multiple sclerosis allergic reactions, Crohn's diseases etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAT89345 standard; cDNA; 3901 BP

As p160 boosts B cell infections by pathogenic microorganisms, p160 can be used to expand T cell populations for treating infectious diseases or cancer and p160 thibitors could reduce B or T cell responses and may be used to treat a militial and contains and could reduce be cell infectious diseases or cancer and p160 thibitors could reduce B or T cell responses and may be used to treat a militial and could reduce B or T cell responses and may be used to treat a militial and could reduce B or T cell responses and may be used to treat a militial and could reduce B or T cell responses and may be used to treat a militial and could reduce B or T cell responses and may be used to treat a militial and could reduce B or T cell responses and may be used to treat a militial and could reduce B or T cell responses and may be used to treat a militial could reduce B or T cell responses and may be used to treat a militial could reduce B or T cell responses and may be used to treat a militial could reduce B or T cell responses and may be used to treat a militial could reduce B or T cell responses and may be used to treat a militial could reduce B or T cell responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial responses and may be used to treat a militial respon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This cDNA sequence encodes a novel p160 (160.1) which is capable of activating transcription of a variety of genes upon activation of p62 and is capable of binding to the p62/p561pk complex to modulate Lck function in a manner similar to p62. The genes transcribed in response to development/differentiation, T or B cell activation or production of T or B cell specific factors e.g. lymphokines or antibodies. This p160 polypeptide is also a substrate for serine/threenine kinase activity. P160 polypeptides can modulate degradation of cellular proteins e.g. cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       319 GATGCAGGTAATGCGGCAGGTACAGGTGACGAGTCAGATGAAGTTGATGAAGA 371

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the probes with a collection of detectally labeled nucleic acids collectived from mRNA of human breast, and then measuring the label collectived from the probes of the microarray. The probes are useful for collection of regions of genomic DNA predicted to determining predisposition and/or prognosing breast disease. Gene collective of expression analysis is useful for assessing the toxicity of chemical collective of eagents on cells. The microarray of this invention presents a far greater collective of probes for measuring gene expression, with far less bias crapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Collective than expressed atta for this patent did not form part of the from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

                                                                                                                                                                                                                                                                                                                                                                                           (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 25; SEQ ID No 12047; 487pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

                                                    Human breast cell single exon nucleic acid probe #2818.
                    Human; microarray; single exon probe; gene expression; breast;
                                                                                                                         ABA44123
                                                                                          01-FEB-2002
                                                                                                                                                  ABA44123 standard; DNA; 1944 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases of the breast cancer, disorders of development, inflammatory diseases of the breast, fiborocystic changes, proliferative breast disease and

                                                                                                                                                                                                                                                                                                                                                                                                      nucleic acid probes for measuring gene expression in a sample derived CC from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids CC derived from mRNA of human breast, and then measuring the label CC werifying the expression of regions of genomic DNA predicted to CC encode proteins. They are useful for gene discovery, and for CC encode proteins. They are useful for gene discovery, and for CC determining predisposition and/or prognosing breast disease. Gene CC expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater CC diversity of probes for measuring gene expression, with far less bias CC than expressed sequence tag microarrays. The method is suitable for crapid production of functional information from genomic sequence. The CC present sequence data for this patent did not form part of the CC printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                             Matches
